

# Science home learning

## Year 5 & 6

### Materials

1. Fill a container with white vinegar and carefully drop the egg inside. Make sure the egg is completely covered.
2. After a couple of days, carefully rinse the egg, rubbing the shell gently.
3. If some shell remains, leave it for another day in the vinegar and then rinse again.
4. Once the shell is removed, carefully try to bounce the egg.
5. Write a conclusion about what you have discovered.

### The Science Bit

Investigation! Can you measure at what height it breaks? (maybe try this outside!) Or how high it can bounce on different surfaces?
